FOREST MANAGEMENT AND REFORESTRATION IN THE US

TOM FOX, FOX FORESTRY AND SCOT MCGUIRE, CONSULTANT

FOREST MANAGEMENT & REFORESTRATION IN THE US

McGuire Consulting Services GmbH

INTENSIVE vs. EXTENSIVE

Many SMALL landowners concentrate on managing their forests. There are only a few owners of LARGE forests, these are extensively managed (specifically for industrial purposes such as paper and building materials).

THE UNDER-STORY

Scratching the surface on invasive species (Site preparation is key for faster Re-Growth)

THE UNDER-STORY

Species extinction / Forest of the future

Rescue Mission to save the North American Chestnut tree. University of New England and Professor Tom Klak are working to reintroduce a national treasure.

Whether the answer lies in hybridization, genetic modification, another method, or a combination of approaches, Klak is hopeful that success in saving the American chestnut will translate to triumph in preserving other troubled species like ash and hemlock. “It would be an amazing ecological turnaround”.

Thomas Klak

Deer Mom,

*There are more deer than guns in the US.
Landowners need more protection (TRICO®
is an effective tool for forest re-growth).*

*Signed,
Bambi*
